

Commands

Clone the Repository

```
git clone YOUR_REPOSITORY_URL
```

Go to the Project

```
cd inventory-management/inventory-managemnet-
```

Go to the Streamlit Application

```
cd streamlit/01_app_test
```

Activate Conda Environment

```
conda activate streamlit_env
```

Check Python Version

```
python --version
```

Install Streamlit

```
python -m pip install streamlit
```

Check Streamlit Version

```
python -m streamlit --version
```

Run the Streamlit Application

```
python -m streamlit run app.py
```

The application will normally be available at:

```
http://localhost:8501
```

Git Commands

Check Repository Status

```
git status
```

Check Current Branch

```
git branch
```

Add Changes

```
git add .
```

Commit Changes

```
git commit -m "Update project"
```

Push Changes to GitHub

```
git push origin main
```

Pull Latest Changes

```
git pull origin main
```

Check Remote Repository

```
git remote -v
```

Complete Workflow

After making changes to the project:

```
cd ~/inventory-management/inventory-managemnet-/streamlit/01_app_test
```

```
conda activate streamlit_env
```

```
python -m streamlit run app.py
```

After editing the project:

```
git status  
git add .  
git commit -m "Update Streamlit app"  
git push origin main
```

Stop Streamlit

To stop the running Streamlit server, press:

```
Ctrl + C
```
